## INSPECTIS “Real Life HD” Package is the Next Best Thing to Being There

*Solna, Sweden* – We can’t all be always where we want to be, in the next room, the next city, or on the other side of the world, but when you want the next best thing to real face time, INSPECTIS AB now makes it possible with its new “Real Life HD” technology package for remote conferencing over readily-accessible common telecommunications applications via the Internet. INSPECTIS Real Life HD basically “super-charges” these telecommunications applications by adding or extending their impact and capabilities, because the INSPECTIS Real Life HD C12 package enables easy sharing of vivid HD quality live video and details beyond the capability of normal webcams.

Whether it’s remote learning, remote conferencing, or telecommuting, the INSPECTIS Real Life C12 system requires only a simple connection to Windows or Mac computers to establish high-quality communication and sharing of detailed magnified images with others anywhere in the world using standard webcam based conferencing systems.

For example, INSPECTIS’ macro/microscopic video imaging makes it possible to easily share and discuss tiny details of objects, circuit boards and assemblies, medical devices, and more. It enables participants to choose whether to problem solve, help with development, or simply show and tell, even if they are an ocean away. There’s no need to book a flight or drive for hours anywhere.

The no-fuss controls allow the user to zoom-in, share and have live discussions on technical, development and quality issues pertaining to any item or subject that requires close examination. The

Real Life package allows easy USB3.0 connectivity. Other camera optional configurations including F30 and U30 are available; please inquire. For more information, visit [www.inspect-is.com](http://www.inspect-is.com).

### **About INSPECTIS**

INSPECTIS AB offers advanced optical inspection solutions for the electronics and medical device manufacturing industries. a line of plug and play, reliable and cost-effective digital camera microscopes designed for demanding non-contact optical inspection and assembly.
