

Diffuser Filter

For Dual White & UV Ring Light

Quality of Inspection

The diffuser scatters the emitted light from LED light sources, turning small, bright, and directional point sources into a larger, broader, and more uniform illumination. In addition to improving colour accuracy, the diffuser eliminates the intense reflections on shiny surfaces. This allows the camera to capture the actual colour, texture, and topography of the specimen without being affected by hotspots.

Made of black anodized aluminium and opal filter. The Diffuser Filter is easily mounted on Inspectis Dual White & UV RingLight with Segment Control and secured with a thumb screw.

Specification:

Mounting Diameter	Φ110.2 mm
Size	φ120 (OD) x φ73.5 (ID) x 10.5 (H) mm
Weight	70 gr.

Order Numbers:

- HD-124-D** Diffuser Filter for Segment Control RingLight
- HD-024-WUV** Inspectis Dual White & UV RingLight with Dimmer and Segment Control
